1. Send a mouse click to the icon, then you will see size of icon. 2. Click one of the tag to make it red. 3. Now you can reduce size of image. 4. Click again to make it blue. 5. You can reduce size again. A: Your picture is a vector file (with the.png extension) and not a bitmap. PNG files have no "size" really. They are stored as a list of pixels, and a list of pixels is exactly the same size no matter how you look at it. To make the "magnification" effect, you have to use vector file software. Vector image editing programs like Adobe Illustrator, Paint Shop Pro or CorelDraw can easily resize the icons or logos. I recommend to use Photoshop for this kind of editing, or a dedicated vector image editor, if you have a Mac. If your picture is in.jpg format, you may want to convert it to.svg or.png format first to avoid the loss of quality of your image. Q: How to find the point with maximum absolute value I have a vector V with all positive numbers, and I want to find the point P which has the maximum absolute value. I tried to use this code: def find_the_point_with_the_maximum_abs_value(v): return min(abs(x) for x in v) but the code outputs the value of v, not its point with the maximum absolute value. A: Note that you are calling min with an argument of type list - use x.min instead of min, as suggested by the error message. As for your question: why does min(abs(x)) give you the value of v? It gives you the value v because you are using min() on a generator expression which is equivalent to: [abs(x) for x in v] for some v (presumably v=v). In other words, you are calling min on the sequence [abs(x) for x in v], where x in v is actually equivalent to x in v[0]. Since v is a list, v[0] evaluates to the first value in the list, which is the value of v (again, presumably v=v). To fix your function

I have to embed PHP files into SQL Server databases using Access MDE (and that's the problem) - I can easily change the directory of the uploaded file, but I don't have any way to change the filename inside Access MDE. I think that there should be a VBA code to change a file name (not extension - name) of the file. But I can't find the code anywhere. Can you help me with this code? Thanks in advance. Hello. Lost Tales of the Dark Past Volume I The Stolen Chapters The Book of Game The Stolen Chapters of The Book of Game When the Great Conclave was held, it was an eight year wait for all the Book of Game was to be revealed. In the end, after many years of thinking and writing, Lord Maguier had finally completed his Book of Game. The Gatherings You are here No book can be written without a plot. One cannot write a novel without a plot, just like one cannot write a play without a script. So, how does a script come about? How does one come up with a story? With a plan, of course. A plan to write a story. A plan to write a play. As you can tell, writing and writing a script, like writing a novel, like writing a play is all about planning. A writer of fiction must plan their story, plot their plot and come up with a story arc, one that will carry the story forward. A writer must plan to write a novel, they must have a plan to create an intricate plot. A writer must plan to write a play, they must have a plan to create a well-rounded script. And what about writing a book? To write a book is different. To write a book one must plan to write a story, one must plan to tell a tale. But, how does one plan to write a story, which is a story in itself? How does one come up with a story arc?
