Users no longer need to manually mask objects they wish to delete or replace, and the Photoshop one-click tool lets you remove and replace objects with a single action. The Easy Mask function automatically creates a mask around the object, so users just need to select the object they want to remove. Once the object has been deleted, the mask instructs Photoshop to fill in the mask with the new object, as if the object were never there. When working on photos that are composed of multiple layers, users no longer need to worry about accidentally editing the background layers. With the new Delete and Fill ability, they can intuitively remove the background by selecting the background and using the Delete and Fill options. For example, when deleting text from a photo, users can choose to delete the background if the text is on top of the background, or leave the background as-is if it sits below the text. Users can also select a solid color, which removes it from the photo. Selection editing is now as easy as drag-and-drop in Photoshop. Smart guides automatically store a selection within an image so that you can easily resize an object without making changes outside of the selection. For example, if you want to change the size of an object, simply drag a corner point along the guide to resize the object. Smart guides are smart because they remain constantly connected and closely follow your selected object's edge. Select tools, layers and adjustment layers stay connected to the selection in order to be aware of how that selection is affecting their settings. Users can also create, edit and manipulate duplicate, feather, warp and track selections simultaneously.
